Parliamentary report devastates 'Global Warming' scam

The Australian Federal Parliament's Standing Committee on Science and Innovation recently completed a report entitled *Between a Rock and a Hard Place*, on the subject of "Geosequestration of Carbon Dioxide". However, four members of that committee have issued a "Dissenting Report" which devastates the Committee's major premise—that mankind causes global warming.

The dissenting MPs are former CSIRO scientist Dr. Dennis Jensen, Hon Jackie Kelly, Hon Danna Vale and Mr. David Tollner. Their report was compiled with the assistance of a number of leading scientists, including climate scientist Dr. John Christy, former lead author of the IPCC. It is must read for anyone concerned with the subject.

They state at the very outset that, "We disagree with the report's unequivocal support for the hypothesis that global warming is caused by man-so-called anthropogenic global warming (AGW). We are concerned that the Committee's report strays well outside its terms of reference. In fact, the committee did not take any evidence relating to anthropogenic global warming."

Some of the chief points of their refutation include:

* Global warming is observed on other planets or moons, including Mars, Jupiter, Triton, Pluto, Neptune and others. Did man cause this?

* That the so-called "overwhelming consensus" embodied in the IPCC report has nothing to do with science, nor does such a consensus even exist. It is in fact drawn from its "Summary for Policymakers" which was written by politicians, not by scientists, and its supposed "90% certainty" is backed up by nothing in the report, but is merely a "consensus opinion arrived at by IPCC bureaucrats"; and, in any case, so-called "democratic consensus" is entirely opposed to scientific method. "Consensus", for instance, once held that the earth was at the centre of the universe, and that it was flat.

* That the "Stern Review" upon which the Committee based its majority report, was drafted by a man who "acknowledges that he had zero understanding of the issue less than one year before the Stern Review ... It is staggering that someone with essentially no scientific knowledge on greenhouse effect, within less than one year, had acquired the scientific knowledge to state that the 'scientific evidence is now overwhelming'."

* "Indeed, if one paragraph clearly illustrates the one sided nature of this report," the dissenters say, "it is paragraph 5.59. Here, we have a captain of industry (Rupert Murdoch), who, by his own admission is not a scientist, quoted regarding his view on anthropogenic global warming and the need to take action", citing Murdoch's claims that "climate change poses clear catastrophic threats."

There is much more, on glaciers, rising sea levels, Australia's rainfall patterns, etc., and the report is extensively footnoted. It may be accessed at:
